

# Templating Tutorial

PocketQuery has a rich templating mechanism embedded and you can create totally different visualizations for your query results. Tables, lists, documents, bar charts, pie charts - there are no limits

## Topics

- [Prerequisites for the Templating Tutorial](#)
- [The Default Template](#)
- [Custom CSS To Highlight Particularly High/Low Values](#)
- [Continuous Text And Lists](#)
- [Template For Dynamic Parameter Change](#)
- [Using Google Charts](#)

Start with "[Prerequisites for the Templating Tutorial](#)"

## Conclusion

These were only a few examples on how to use chart visualizations in PocketQuery. As you might guess if you read so far, the possibilities are nearly unlimited. PocketQuery is in constant development and we will make the chart feature even better by including different libraries in the future.
